Social Dominance Orientation and Need for Closure Predict Four Classes of Attitudes Toward LGBTQ Identities

Cynthia Blaise
Virginia Commonwealth University, Department of Psychology

Background

•

Methods

- Using data from Valen & Burke (2025), a study that collected attitudes toward various identity groups, I applied a Latent Class Analysis to responses on questions on Nonbinary, Gay / Lesbian, and Bisexual Identities (Study 1) and Transgender, Nonbinary, Gay / Lesbian and Bisexual Identities (Study 2).
- Following suggestions for class determination in the literature, I iterated through models from two to ten classes for each study with no covariates included.
- For study 1, a model with four classes exhibited lowest BIC and selected for use in further analysis.
- Following the results of the first LCA, I ran the iterative process again on the data from the second study to test if the four class model with similar performance would replicate when adding additonal paramaters.
- Included for each study's model were five covariates: Need for Closure, Social Dominance Orientation, Age, Religiousity, and Liberal / Conservative self identification.

Conclusions

•

Results

Study 1 Model Fit

- LL: -6274.163
- G:
- AIC: 13016.33
- BIC: 14003.01

Predicted class memberships

- Class 1: 33% (0.3293)
- Class 2: 26% (0.2615)
- Class 3: 23% (0.2335)
- Class 4: 18% (0.1756)

Study 2 Model Fit

- LL: -10180
- G:
- AIC: 21308
- BIC: 23342.21

Predicted class memberships

- Class 1: 22% (0.2204)
- Class 2: 22% (0.2222)
- Class 3: 21% (0.213)
- Class 4: 20% (0.1981)
- Class 5: 15% (0.1463)
